Title: The Lost Treasure Of The Moonlight Island

Semester/Year: Fall 2025

Software: .HTML, .CSS

#### **Description**:

This “Choose Your Own Adventure” project tells the story of a daring explorer searching for the legendary treasure of Moonlight Island. The reader makes choices that lead through mysterious forests, hidden caves, and coastal villages.

I was inspired by classic adventure games and stories about exploration and discovery.

The most challenging part was linking multiple HTML pages smoothly and designing each with its own atmosphere using CSS. I solved this by creating consistent navigation links and experimenting with gradients, animations, and hover effects to make each scene visually engaging and immersive.
